

Autoconer Spray

Autoconer Spray

AC-400 Autoconer Spray is a mild lubricant based on Synthetic Oils for application involving precision parts where sliding parts of minimum tolerances are present. It provides a very thin lubricating film and corrosion protection.

Application

It is the most suitable for Splicers and Knotters of Autoconer Machine. It is also suitable for precision machines where small parts to be lubricated . It has a very thin film of lubricant

Appearance : Light coloured

Density : 0.75 gm/cc

Reduced frictional losses, leading to lower sump temperatures and higher gear efficiency

Improved load-carrying properties and reduced wear.

Higher thermal stability, minimal sludge and deposit formation

Inherently higher viscosity index plus low pour point enable equipment of operate over a wider range of service temperature.

Reduced power consumption arising from easier starting, faster warm-up and lower coefficient of friction.
